

# NNs (Luis Serrano)

Example: perfect room-mate who cooks simple dishes

dishes cooked: pie  $\begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$ , burger  $\begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$ , pizza  $\begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix}$

weather: ~~sunny~~  $\begin{bmatrix} 1 \\ 0 \end{bmatrix}$  ~~rainy~~  $\begin{bmatrix} 0 \\ 1 \end{bmatrix}$

## (1) simple feedforward NN

Rule to encode: weather  $\begin{cases} \text{sunny} \begin{bmatrix} 1 \\ 0 \end{bmatrix} \rightarrow \text{pie} \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix} \\ \text{rainy} \begin{bmatrix} 0 \\ 1 \end{bmatrix} \rightarrow \text{burger} \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix} \end{cases}$

hard coded weights

$$\begin{bmatrix} 1 & 0 \\ 0 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 1 \\ 0 \end{bmatrix} = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$$

 sunny      pie

$$\begin{bmatrix} 1 & 0 \\ 0 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 0 \\ 1 \end{bmatrix} = \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$$

 rainy      burger

intuitive enough  
(2 food items ...)

$$z_j = \sum_{i=1}^{D=2} w_{ji} x_i + \underbrace{w_{j0}}_{\text{bias} = 0}$$

representation  
for non-zero weight  
connections

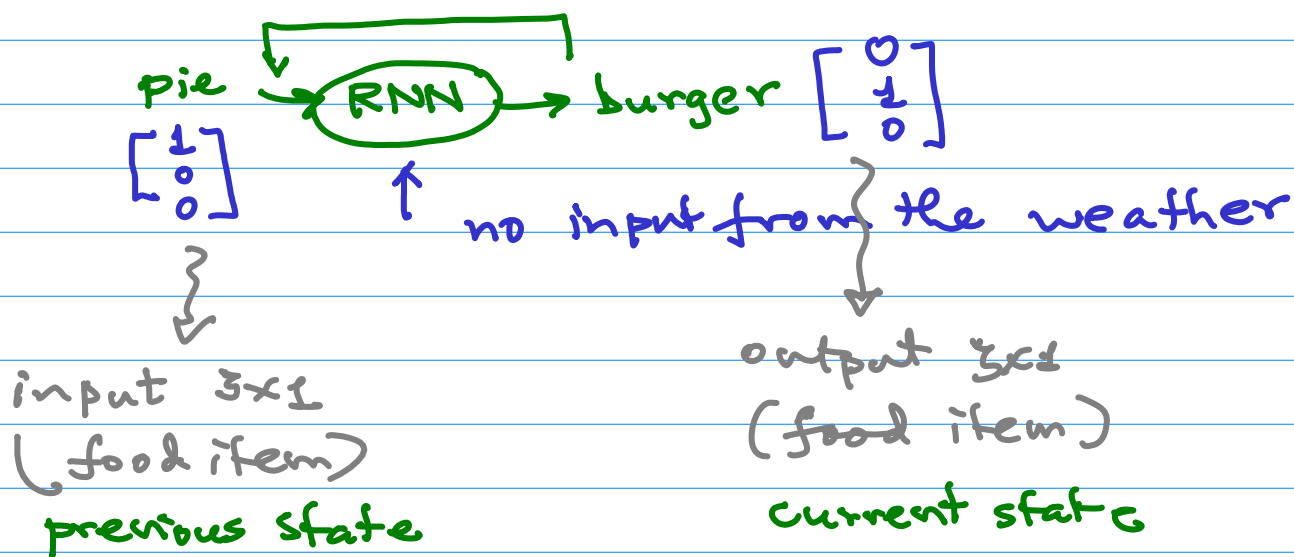

## Example 2: Simple RNN for a sequence, without an input

Suppose the room-mate cooks in sequence

Mon Tue Wed Thu Fri Sat Sun  
pie burger pizza pie burger pizza pie ...

→ this needs an RNN

$$\begin{bmatrix} \boxed{0} & \boxed{0} & \boxed{1} \\ \boxed{1} & \boxed{0} & \boxed{0} \\ \boxed{0} & \boxed{1} & \boxed{0} \end{bmatrix} \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix} = \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$$

pie                      burger

$$z_j = \sum_{i=1}^{D=3} w_{ji} x_i + \underbrace{w_{j0}}_{\text{bias} = 0}$$

Example 3: To encode an RNN with an input  
the weather

Given: Rule:

 sunny  $\begin{bmatrix} 1 \\ 0 \end{bmatrix}$   $\longrightarrow$  same food item as on the previous day

 rainy  $\begin{bmatrix} 0 \\ 1 \end{bmatrix}$   $\longrightarrow$  next item in sequence  
(pie  $\rightarrow$  burger  $\rightarrow$  pizza)

Mon Tue Wed Thu Fri Sat Sun

pie  $\rightarrow$

## (1) Food matrix

(1) pie  $\begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$

(2) burger  $\begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$

(same item)

(3) pizza  $\begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix}$

(next item)

burger

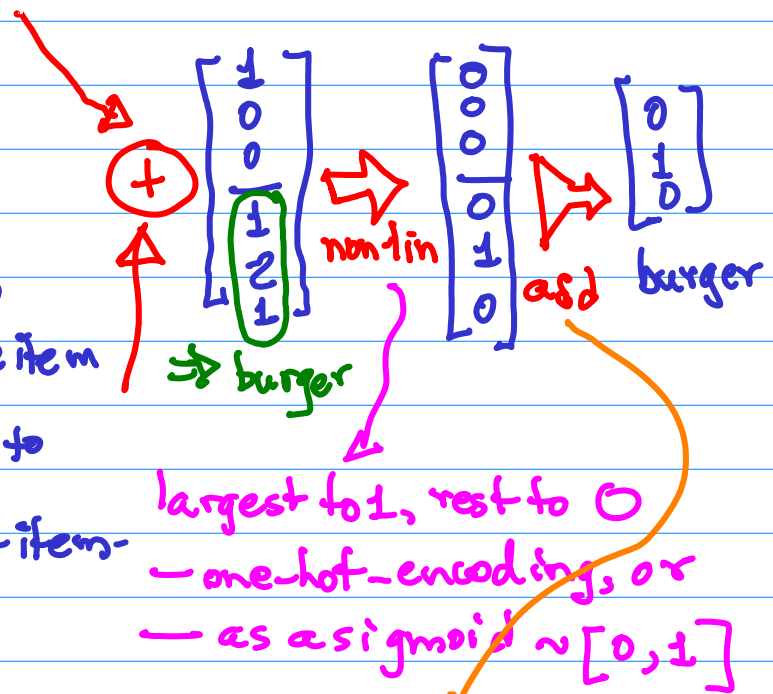

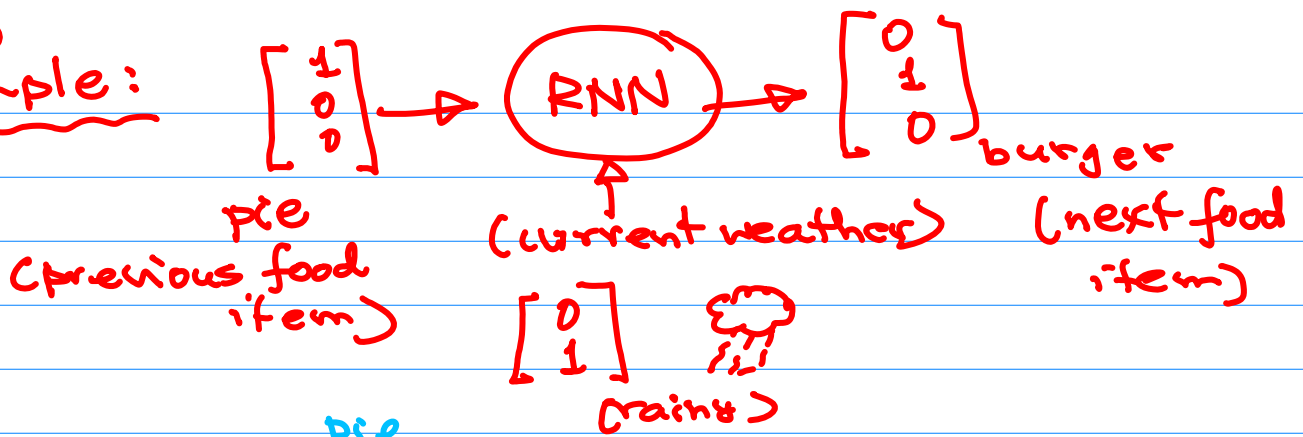

## (2) Weather matrix

(1) sunny

(3)  
Example:

addition can also be represented as a matrix operation

$$\begin{bmatrix} 1 & 0 & 0 & | & 1 & 0 & 0 \\ 0 & 1 & 0 & | & 0 & 1 & 0 \\ 0 & 0 & 1 & | & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} 1 \\ 0 \\ 0 \\ | \\ 0 \\ 1 \\ 0 \end{bmatrix} = \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix}$$
